QUALITY POLICY

The primary objective of OES Asset Integrity, part of the OES Group, is to provide competent personnel, suitable equipment, and associated services that conform to customer, contractual, statutory, regulatory, and applicable industry requirements, and that consistently deliver results of uncompromising quality.

This commitment is guided by our core values of Excellence, Safety, Innovation, People, Global Reach, and Reliability. These values are supported by a strong quality culture and ethical behaviour that promote integrity, accountability, transparency, professionalism, learning, and continual improvement.

To achieve this objective, OES Asset Integrity is committed to establishing, implementing, maintaining, and continually improving an effective Quality Management System that:

- Provides a framework for setting, monitoring, and reviewing measurable quality objectives that support operational excellence and customer satisfaction.
- Ensures that customer, contractual, statutory, regulatory, and applicable industry requirements are identified, understood, and fulfilled through effective processes and documented procedures.
- Applies risk and opportunity-based thinking to improve performance, effectiveness, and business results, supported by objective evidence.
- Considers relevant internal and external issues and the changing needs and expectations of interested parties, including technological developments, climate-related factors, and emerging business challenges.
- Promotes organizational resilience through effective planning, management of change, and preparedness for operational disruptions.
- Supports innovation, industry best practices, and the global capabilities of the OES Group to deliver responsive, consistent, and reliable services.
- Develops and empowers our people through competence, training, knowledge sharing, awareness, and active participation.
- Leverages the global capabilities of the OES Group to provide responsive, consistent, and reliable services worldwide.

OES Asset Integrity performs inspections impartially and objectively. It uses documented safeguards to keep inspection separate from rectification and other support services. Risks to impartiality are identified and eliminated or minimized, and no commercial, financial, or other pressure shall influence inspection outcomes. Inspection data is kept confidential unless disclosure is required by law or agreed with the customer.

Top management leads the Quality Management System and provides the resources it needs. Everyone working for or on behalf of OES Asset Integrity is responsible for applying this policy. This policy is communicated internally, made available to interested parties, and reviewed periodically for continuing suitability.

Renato Almeida
Vice President – Asset Integrity
